## **Hurricane Bar Installation Instructions**

Follow Instructions below for easy installation of the Hurricane Bar.

- 1.** Two Hurricane Bars should be used per window or opening. Three to Four bars may be necessary for unusually tall doors or windows.
- 2.** Loosen black knob (Caution: device contains a spring. Safety goggles should be worn. Hold Hurricane Bar in vertical position away from face or other persons when loosening knob. Smaller tube should be on top.)
- 3.** Compress Hurricane Bar and position horizontally between window or door casing on flat surface with black knob facing out towards you. Position top bar approximately 10"-16" down from top of opening and bottom bar 10"-16" from bottom of opening. Make sure bars are as level as possible.
- 4.** Once bars are positioned and leveled, tighten black knob. If needed, use wrench provided to tighten knob - **DO NOT OVERTIGHTEN, SNUG ONLY.**
- 5.** Use wrench provided or 9/16" open-end wrench to back out "Foot" on end of Hurricane Bar. 3-5 turns should suffice. This will secure Hurricane Bar in window or door casing.
